Most people, about 8 in every 10, recover from this disease without getting very ill or needing special treatment.

Did you know?

Do not self-medicate! Call your clinic or doctor ahead of your visit or the National Institute Communicable Diseases (NICD) hotline: 0800 029 999

The symptoms are very similar to that of a common cold or flu. It may include signs such as a fever, feeling tired, coughing, aches and pains, nasal congestion (also called a stuffy nose), runny nose, sore throat or diarrhea (a runny tummy). If you, your child or any family member shows any of these signs, please seek medical attention.

IMPORTANT

Do not self-medicate! Call your clinic or doctor ahead of your visit or the National Institute Communicable Diseases (NICD) hotline: 0800 029 999

See page 9 how to explain coronavirus disease COVID–19 to your child.
PROTECT & PREVENT

It starts with your HANDS

What is so special about our HANDS?
MOST infections are spread through your hands and the hands of others.
That is why keeping your hands clean is the easiest and most effective way to prevent you from picking up germs and viruses that will make you ill.

WASH your HANDS regularly with soap and clean water

Handwashing with soap and running water is the best way to prevent the spread of germs and viruses.
Wash your hands often with soap and running water for 20 seconds.

The easiest way to know how long 20 seconds is, is to sing ‘happy birthday’ two times or to sing the first verse of our national anthem, Nkosi Sikelel’ iAfrika.

When washing your hands with soap and running water, you should not open the tap fully. Be wise with the water usage when using this method.

Did you know?
Regularly washing your bare hands with soap and running water offers more protection against catching the COVID-19 virus than wearing rubber gloves.

(REMEMBER)
Wash your hands with soap and water – and assist your child to wash his or her hands properly with soap and clean water.
This will not only help with the prevention of diseases, but also create healthy habits that will last a lifetime.

(WORLD HEALTH ORGANISATION)
More about your HANDS

From the HANDS to the EYES, MOUTH AND NOSE

When our hands are not clean and we touch our (or other people’s) eyes, nose or mouth, we spread germs and viruses.

Try to avoid touching your or your child’s eyes, nose or mouth unnecessarily, and if you must, wash your hands before you touch these areas.

Teach this to your child from a young age. Another healthy habit that will last a lifetime.

Did you know?
Our hands touch many surfaces and objects every day. This is how germs and viruses get from these surfaces and objects to our hands – and then when we touch our eyes, nose or mouth, these germs and viruses enter our bodies.

Don’t touch the T-zone
Never put your fingers in or on your...

eyes, nose or mouth
Even more about your HANDS

From HAND TO HAND

When we greet each other, we often do that by shaking hands or hugging. It is time to learn a new way of greeting that will help us to protect ourselves from germs and viruses.

It is called the ‘elbow greet’.

DO IT LIKE THIS:

1. Bend your arm and extend your elbow to the person that you want to greet.
2. He or she should do the same.
3. Then you greet by touching elbows. It’s cool.
4. And we should teach our children to do the same.

Here are other cool non-contact ways to greet

- wave
- namaste (is a slight bow and hands pressed together)
- foot shake

A quick summary about HANDS

✓ Most infections are spread through your hands and the hands of others
✓ Wash your hands regularly with soap and running water for 20 seconds.
✓ When our hands are not clean and we touch our (or other people’s) eyes, nose or mouth, we spread germs and viruses.
✓ Greet with the elbow greet. Do not shake hands.
COUGHS AND SNEEZES

CATCH your cough or sneeze
When we cough and sneeze, droplets leave our mouths and noses into the air – about one meter around us.

If you cough or sneeze, cover your nose and mouth with a flexed elbow or tissue. Remember to throw the tissue away in a closed dustbin after using it.

Teach your child to do the same when he or she coughs or sneezes.

REMINDER
Wash your hands with soap and clean water every time after you have coughed or sneezed. And teach your child to do the same. Another healthy habit to learn from an early age.

If you
COUGH or SNEEZE
cover your
nose and mouth
with a tissue please

Now these are smart ways to put a travel ban on me and other viruses or germs.

Little hands matter
ONE METER DISTANCE

Keep at least one (1) meter distance between yourself and anyone coughing and sneezing. The droplets from a sneeze or cough cannot travel that far in the air!

Avoid touching people unnecessarily. This is also called social distancing.

Even if I am in the droplets that leave your mouth, I cannot travel that far by air.

1 meter  1 meter  1 meter

AVOID CROWDED PLACES

In crowded places like shopping centres, places of worship and community gatherings, we are very close to other people. Lots of people touch the same surfaces that we do, cough and sneeze and are very close to us. This creates opportunities for germs and viruses to spread very quickly.

If you can, avoid these places or go at times when there are not many people.

I love crowded places. It makes it easy for me to visit other people.
WHEN YOU FEEL SICK

STAY AT HOME WHEN SICK

If you feel sick or your child feels sick - **stay at home**. In this way, you protect yourself, your child as well as other people. Remember to seek medical help immediately as well.

**Do not** go back to work if you have not fully recovered, or send your child back to the early childhood development programme or school before he or she has fully recovered.

IF YOU OR YOUR CHILD HAS COVID-19
(the new Coronavirus)

If your health care practitioner confirms that you or your child has the COVID-19 (newest Coronavirus), **DO NOT PANIC**. They will tell you what to do and prescribe any medication that you or your child may need.

Here are a few things to keep in mind:

1. **Eat healthily** *(this helps the body to fight the virus)*
2. **Drink lots of fluid** *(water)*
3. **Avoid contact with other people** *(in this way we prevent other people from getting the virus too)*
4. **Speak to your child about his or her illness in a calm and comforting manner**
5. **Stay at home until fully recovered**
6. **Monitor the symptoms.** If they get worse, contact your health care practitioner

As COVID-19, I show the signs of infection that are very similar to that of my other family members - the common cold or flu.
**TALK to your YOUNG CHILD about the CORONAVIRUS (COVID-19)**

**Be willing to talk.** Your young child is curious and attentive. They will already have heard something. Silence and secrets do not protect our children. **Honesty and openness do.** Think about how much they will understand. You know them best.

**Your child may ask (many) questions.** And even if your child does not ask questions or is too young to ask questions, you will notice that he or she is still curious about the changes happening in their world (and your response to it).

**There are a lot of stories going around.** Some may not be true. Get the correct information about the coronavirus (COVID-19). Speak accurately about the risk of COVID-19 based facts and the latest official health advice (see pages 2 and 11).

**Be open and listen.** Allow your child to talk freely. Ask them open questions and find out how much they already know.

**Be honest.** Always answer their questions truthfully. Think about how old your child is and how much they can understand. Discuss the issues simply and in a calm manner. Remember young children often understand complicated issues better if we explain it to them in a concrete manner.

**It is OK not to know the answers.** It is fine to say: “We don’t know, but we are working on it;” or “We don’t know, but we think...”. Use this as an opportunity to learn something new with your child!

**Be supportive.** Your child may be scared or confused. Give them space to share how they are feeling and let them know you are there for them.

**Heroes not bullies.** Explain that COVID-19 has nothing to do with the way someone looks, where they are from, or what language they speak. Tell your child that we can be compassionate to people who are sick and those who are caring for them. Look for stories of people who are working to stop the outbreak and are caring for sick people.

**End on a good note.** Check to see if your child is okay. Remind them that you care and that they can talk to you anytime. Then do something fun together!
